## **Garbage Can Enclosures**

(GCE's) are bear resistant welded steel boxes that can hold from one to three cans of garbage. They are permanently installed on a concrete base.

This option allows the resident to have 7 day a week / 24 hour a day, wildlife resistant garbage storage located away from the home or garage. Units are serviced weekly by Waste Management. Larger units also accommodate recycling storage. Approximate installed costs are \$700 to \$1200, depending on size. There is no TRPA coverage requirement if it is a standard, pole mounted unit 18" off the ground.

If the GCE is located between 12 to 20 feet from the edge of the road (curb) - there is no extra charge for garbage pick-up, and Washoe County right of way issues are avoided. Containers must be located on private property, out of public right of way and utility easements.

**Bear Resistant Poly Carts** are available locally in the in 96 gallon size. They are constructed of injection molded plastic with steel reinforced side rails and lid. They can be stored outside, but must be rolled to the curb for service. They have a push to close latching system. For more information, call IVGID Waste Not: (775) 832-1284.
